- Albina Shynkar, s2207966
- Eda Yardım, s2472651

The Cofano Software Solutions employees are in demand for communication during the hard times of COVID-19. They are using sources like discord and slack, etc. in order to communicate with each other for work-related activities. However, any employee of the Cofano Software Solutions should not be disturbed with random talks by other web applications. That is why they are in need of a new web application that will help them to always be in good contact with each other. Therefore, a new web application called "Cofano Coffee Corner" needs to be created and can be used during quarantine and later on. Using this new web application employees need to be able to plan their breaks during the working day in the company, text each other in the group chat, sign up for some events (e.g. Friday drinks, company lunch, etc.) and simply have fun. The "Cofano Coffee Corner" web application should be available on employees' smartphones but prioritized to be used on the desktop.

In general, the Cofano Software Solutions employees want to be able to accomplish the following tasks while using the "Cofano Coffee Corner" web application:

- ❏ Sign in with google account
- ❏ Change the status (from 'online' to 'do not disturb')
- ❏ Pick preferable mode (dark/light)
- ❏ See upcoming breaks on the dashboard
- ❏ See the number of unread messages on dashboard
- ❏ See important messages on dashboard
- ❏ Chat with colleagues in real-time
- ❏ Share the content from the internet in chat
- ❏ Put special characters/emojis in chat
- ❏ See the status of colleagues in chat
- ❏ Have a digital bulletin board and post/view ideas there
- ❏ See the time of posting the bulletin
- ❏ See upcoming events in events page
- ❏ Post the event to events page (plan coffee breaks)

These features will be implemented later on in the upcoming releases and it is assumed some additional requirements can be added while developing the "Cofano Coffee Corner" web application.
